INFO 6205 - Fall 2021

Assignment No : 3

Task :

- To implement height-weighted Quick Union with Path Compression and check that the unit tests for this class all work.
- Using the implementation of UF_HWQUPC, develop a UF client that takes an integer value n from the command line to determine the number of connections.
- To determine the relationship between the number of objects (*n*) and the number of pairs (*m*) generated.

Relationship Conclusion : After performing a series of experiments by passing different arguments of N (100,200,400,800,1600), it can be concluded that the relation between number of random pairs generated (edges) 'M' and the number of objects 'N' is

$$M \approx 1/2\ N \ln N$$

Findings:

For n = 100, M = 229, 1/2N ln N = 230.25
For n = 200, M = 540, 1/2nN ln N = 529.83
For n = 400, M = 1195, 1/2N ln N = 1198.29
For n = 800, M = 2628, 1/2N ln N = 2673.84
For n = 1600, M = 5806, 1/2N ln N = 5902.20

N	M(Actual)	M = 1/2 N ln N (Expected)
10	229	230,25
200	540	529,83
400	1195	1198,29
800	2628	2673,84
1600	5806	5902,20
